

# VanuaView

- **VanuaView** was a software that enabled users to view Fiji's GIS data, namely cadastral and topographic.
- It was developed by Terralink NZ and FGIS (formerly known as FLIS) and launched in 1998.

**vanuaview**

**GIS data local land information**

- VanuaView was used throughout Fiji by groups and individuals in both the public and private sector and from various industries, e.g. real estate, surveying and valuation.
- It was a simple application containing layers like contours, rivers and surveyed land boundaries, and it required data updates from FGIS.

**Changes in technology and the need for a more versatile GIS application is what led to the development of an entirely web based application.**

**VanuaView underwent reinvention to improve:**

**Security**

**Accessibility & Availability**

**User Friendliness**

**High End Machine Compatibility**

**Versatility & Visibility**

**Spatial Analysis Capabilities**

**Data Standardization**

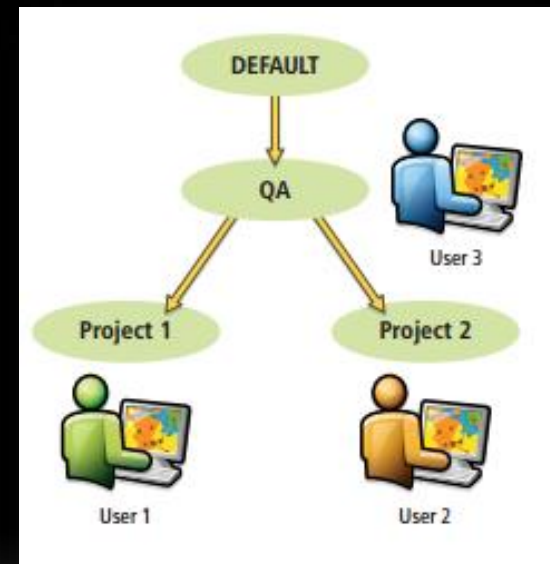

**Overall Functionality**

- **Prior to VanuaGIS, data was displayed in VanuaView as flat-files, e.g. shapefiles and .dgn files.**
- **VanuaView system moved these to a versioned, multi-user environment with numerous productivity improvements.**
